NFPA25 requires annual testing and inspection of fire pump controllers.

When was the last time your *Fire Pump Controller* was tested ?

Is it fully operational? Are you complying with NFPA 25 ?

Rosemont Engineering, Inc. is the authorized service and sales representative for **ASCO/Firetrol, Inc.**
We are committed to quality fire pump preventive maintenance !

In addition to your yearly flow test, we recommend an annual or semi-annual fire pump controller inspection conforming to NFPA25 !

BENEFITS:

Peace of mind knowing the Fire Pump Controller is fully operational...

Professional troubleshooting should a problem be discovered...

Prompt and efficient repair of the fire pump or jockey controller...

Common service parts in stock eliminating costly multiple service calls...

WHAT WE DO:

- Check automatic and manual starts
- Check automatic start with emergency generator
- Verify alarm outputs and connections
- Verify transition timer performance
- Verify proper transfer switch function
- Check and adjust system pressure settings
- Exercise isolation switch and circuit breaker
- Check and tighten all connection terminal points
- Verify minimum run time (or manual stop function)
- Inspect and operate emergency start mechanism
- Provide written laminated report of findings
- Install new data disk; clear event/memory logs (Mark II systems)
